## ALGEBRA

Exam

1. (4 points) Find the complex solutions to the equation $z^{2}+2 i z+i-1=0$. The answer give in the Carthesian form.
2. (5 points) Decompose the rational function $\frac{x^{3}+1}{x^{4}+x^{2}+1}$ into irreducible real fractions.
3. (4 points) Tetrahedron $T$ has a vertex at the origin $O$ and other three vertices $P_{1}, P_{2}, P_{3}$ obtained by intersection of the lines

$$
\ell_{1}:\left\{\begin{array}{l}
x=2 t \\
y=-t \\
z=t
\end{array}, \quad \ell_{2}:\left\{\begin{array}{l}
x=-t \\
y=t \\
z=2 t
\end{array}, \quad \ell_{3}:\left\{\begin{array}{l}
x=t \\
y=2 t \\
z=-t
\end{array}\right.\right.\right.
$$

with the plane

$$
x+y+z=1
$$

Find the volume of the tetrahedron $T$.
4. (4 points) Find the inverse matrix to $\left(\begin{array}{rrr}1 & 1 & -2 \\ -1 & 0 & 3 \\ 2 & 1 & -4\end{array}\right)$.
5. (4 points) Solve the system of linear equations

$$
\left\{\begin{array}{l}
x+2 y+z-2 v=1 \\
-x-y-2 z+v=-1 . \\
x+4 y-v=0
\end{array} .\right.
$$

6. (5 points) Find eigenvalues and eigenvectors of the matrix $\left(\begin{array}{rrr}3 & 2 & -1 \\ -4 & -3 & 2 \\ -14 & -7 & 6\end{array}\right)$.
